

**Open position:** Clinical Research Manager USA

**About Medicea** ([www.medicea.com](http://www.medicea.com))

Through the lens of predictive medicine, Medicea leads the design, integrated manufacture, and distribution of 30+ FDA approved spinal implant technologies that have been utilized in over 150,000 spinal surgeries to date. By leveraging its proprietary software analysis tools with big data and machine learning technologies and supported by an expansive collection of clinical and scientific data, Medicea is well-placed to streamline the efficiency of spinal care, reduce procedural complications and limit time spent in the operating room.

Operating in a \$10 billion marketplace, Medicea is a Small and Medium sized Enterprise (SME) with 175 employees worldwide, which includes 50 who are based in the U.S. The Company has an ultra-modern manufacturing facility in Lyon, France housing the development and production of 3D-printed titanium patient-specific implants.

**Position description**

Medicea is seeking a Clinical Research Manager (CRM). CRM is responsible for the overall execution of clinical studies done in the USA, accountable for the study start-up activities and timeline management, organization, administration and execution of the clinical study from start to finish in compliance with GCP, IHC, SOPs, and internal/departmental guidelines.

The measurable outcomes of the position are white papers with tangible clinical and economical results and recognized publications, either in spine journals, or through podium presentation at key spine conferences.

CRM works collaboratively with individuals cross-functionally across the organization.

It is especially important to work with the Clinical team in France HQ, who handles the Rest of the world study and formalize the overall direction.

This person will work hand in hand with the CSO and our team of data analyst in France, to leverage the UNiD data eco-system, which is the back bone of all our clinical efforts.

CRM need to work closely with the Marketing team in USA and Sales Management to achieve the right prioritization of our clinical activities both short term and mid term.

CRM is the primary contact for, vendors, and Principal Investigators and their institutions. Moreover, the CRM supervises Clinical Research Coordinators in conducting clinical study activities including but not limited to scheduling of subjects, executing subject visits per protocols, documentation, and data entry.

**Minimum Job Qualifications:**

Registered Nurse (preferred) or BA/BS or MA/MS degree

5 years of clinical research experience

2 years of clinical research project management experience

Good understanding of clinical research project management techniques

Prior experience and track record at writing excellent white papers and scientific paper accepted by USA publication

Practical knowledge of GCP, ICH guidelines, and FDA regulations

**Knowledge/Skills:**

Excellent proficiency in Microsoft Word, Excel, PowerPoint or equivalent tools

Attention to details and demonstration of quick follow-up to study needs

Commitment to work and quality with demonstrated adaptability to multiple demands and shifting priorities

Good interpersonal skills with clear oral and written communication skills

Handles day to day work challenges autonomously and efficiently

Shows resilience in the face of challenges and demonstrates flexibility

Ideal candidate will seek to learn and grow professionally and takes initiative in leading

spine experience a definite plus. Medical or pharma industry is a must have

French speaking a definite plus.

**Compensation and others:**

Compensation & benefit Commensurate with experience

Location: New York office, significant amount of travel in the USA
